Project Overview

As a group of students, we recognize the increasing importance of online profiles in the recruitment process. The purpose of our project aims to check individual's social media profiles and assist recruiters for hiring purposes by analyzing their social media presence.

The system will allow recruiters to input candidate's details which will then be used to search for candidate's popular social media platforms using the integrated API's or web scraping technique and provide links to candidate's social media pages.

ABOUT US

Vision

Our vision is to create a world where recruiters can effortlessly and efficiently manage multiple social media profiles for their clients. We believe that recruiters should be able to focus on finding the best candidates and building strong professional relationships without the hassle of switching between multiple apps.

Mission

Our mission is to deliver a high-quality app that integrates all your social media accounts, offering a unified and user-friendly experience tailored for recruiters. We strive to enhance your recruitment process by providing a platform that is secure, efficient, and easy to use.

Our Team

We are a dedicated team of developers, designers, who are passionate about simplifying the online presence management for recruiters. Our diverse backgrounds and expertise come together to create a product that is both innovative and reliable, ensuring you have the best tools at your disposal.

Conclusion

Our project aimed to develop a comprehensive social media profiles app, enabling recruiters to access all their social media accounts from a single platform. We focused on integrating popular social media platforms such as Facebook, Instagram, LinkedIn and Twitter(X) to provide a seamless and user-friendly background-check.

In conclusion, our project successfully developed a social media profiles web app that consolidates multiple social media accounts into one convenient platform. Despite facing various challenges, our team demonstrated resilience and adaptability, resulting in a robust and user-friendly application.
